

## Abstraction of Potassium During Sedimentation (Classic Reprint) (Paperback)

Filesize: 7.32 MB

### ***Reviews***

*It is one of my personal favorite pdf. This really is for all those who state there was not a really worth looking at. I realized this book from my dad and i encouraged this pdf to understand.*

*(Katlynn Haag)*

## ABSTRACTION OF POTASSIUM DURING SEDIMENTATION (CLASSIC REPRINT) (PAPERBACK)

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from *Abstraction of Potassium During Sedimentation*  
Outline of Problem. - Primarily this paper seeks to determine whether the absorption of potassium during sedimentation is chemical or physical in nature; secondly, to determine whether the abstraction of potassium differs in kind or degree from that of other bases; and, finally, to determine whether the potassium is absorbed as flocculation takes place, that is when muddy water mingles with sea water. A study of these questions involves, of course, minor ones which will be taken up as they are reached. Previous Work by Other Investigators. - That certain salts are removed from solution as they percolate through soils, has been known for many years. Sand filters for purification of sea water and impure drinking water have been used since Aristotle s time; and the removal of salts from sea water by percolation through sand or earth filters was practiced in Bacon s day (l). Steven Hales in 1739 found that the first portion of sea water passed through stone cisterns was pure (1). A list of other investigators who worked along the same line includes, Berzelius, Matteucie, Humphry Davy in 1813, Gazzeri in 1819, Lambuschini in 1830, Browner in 1836, Huxtable in 1848, Bernays in 1849, and Thompson and Way in 1850. Berzelius filtered salt solutions through sand and found that the salt content was more or less removed; Matteucie found that the concentration of the salt in the solution became successively smaller upon being passed through successive filters (1). Liebig found that aqueous ammonia passed through a clay filter lost its odor, and this result was verified by Thompson and Huxtable. Way in 1850 showed that soils...
