

# Towards Identifying the Physiological and Molecular Basis of Drought Tolerance in Cassava (*Manihot esculenta* Crantz)

Filesize: 4.09 MB

## ***Reviews***

*An incredibly wonderful ebook with lucid and perfect answers. It is written in easy words instead of difficult to understand. It has been printed in an exceptionally easy way in fact it is simply following I finished reading this publication in which really modified me, modify the way I think.*

## TOWARDS IDENTIFYING THE PHYSIOLOGICAL AND MOLECULAR BASIS OF DROUGHT TOLERANCE IN CASSAVA (MANIHOT ESCULENTA CRANTZ)

To get **Towards Identifying the Physiological and Molecular Basis of Drought Tolerance in Cassava (Manihot esculenta Crantz)** PDF, please refer to the hyperlink beneath and download the ebook or get access to additional information which might be related to TOWARDS IDENTIFYING THE PHYSIOLOGICAL AND MOLECULAR BASIS OF DROUGHT TOLERANCE IN CASSAVA (MANIHOT ESCULENTA CRANTZ) ebook.

Cuvillier Verlag Feb 2010, 2010. Taschenbuch. Book Condition: Neu. 211x149x12 mm. Neuware - Drought is one of the most important factors limiting crop production in sub-Saharan Africa. This has detrimental effects to the people living in this region, and whose population is increasing more rapidly than their domestic food production. Noticeably, pressure on agricultural land has continued to intensify. Cassava is one of the staple crops with remarkable tolerance to drought. It is adapted to diverse and poor soil conditions, in addition to its flexibility in planting and harvesting times. Understanding its physiological and molecular basis of drought tolerance may help to target the key traits that limit crop yield under drought conditions. To improve our understanding on drought tolerance mechanisms in cassava, the project 'Identifying the physiological and genetic traits that make cassava one of the most drought-tolerant crops' was initiated in 2005 by the Brazilian Agricultural Research Corporation (Embrapa) in collaboration with the International Center for Tropical Agriculture (CIAT); the International Institute of Tropical Agriculture (IITA); Cornell University and University of Goettingen. The ultimate goal of the project was to identify morphological, physiological and molecular traits related to drought tolerance mechanisms in cassava for further progress, and for their application in cassava and other crop breeding programs. The present study was conducted within the framework of this project with 31 African cassava germplasm accessions from IITA and a mapping population developed at CIAT. The objectives of this study were, 1) To develop a protocol for hardening and rapid micro-propagation of cassava plantlets under local, low-cost conditions; 2) To identify agro-morphological attributes that are related to drought tolerance in cassava; 3) To identify drought-tolerant and drought-susceptible cassava germplasm from a selection of African accessions; 4) To identify secondary traits that could be used for phenotyping breeding materials for drought tolerance; 5) To screen the CIAT mapping population with simple sequence repeats (SSR) and expressed simple sequence repeat (ESSR) markers for linkage analysis. Thirty one putative drought-tolerant and drought-susceptible African...
